a
scale changes nothing; size does
the ladder at T = 600 (frozen batteries)
fraction of losing communities trapped
communities M
communities of ≥ 100 agents: trapped at every M
(ring •, scattered △, broadcast □; offsets for visibility)
n = 10, scattered: cascades
n = 10, broadcast: all correct
b
exposure locates the edges; size decides inside
266,400 community outcomes, all geometries and sizes pooled
probability at T = 600
structural cross-exposure x (to initially-corrected)
x ≈ 0.11: escape
in every architecture
defensive wrong
(trapped at horizon)
in transit (mixed)
corrected but
illegitimate
legitimate
c
geometry acts only through exposure
fraction of losing communities trapped at T = 600 (clustered)
communities M (N = 10,000)
meta-network geometry
ring
WS p=.01
WS p=.1
WS p=1
BA
broadcast
fraction trapped
d
the trap has two clocks
M = 100, ring, clustered; aspiration clock 1/ρ
share of losing communities
all trapped
none trapped:
resigned or corrected
corrected
credulous
(resigned, L ≈ 1)
T = 600
T = 2400
